## Whzan Telehealth Device – GP Access to website

Here is a step-by-step guide to cover the basics for GPs to access resident information that has been recorded by the Whzan system. The examples used are mock measures.

1. Visit the Homepage www.whzan.com and click on the login button.

2. Then login. Your Username is your email address and your password would be sent to you via that email.
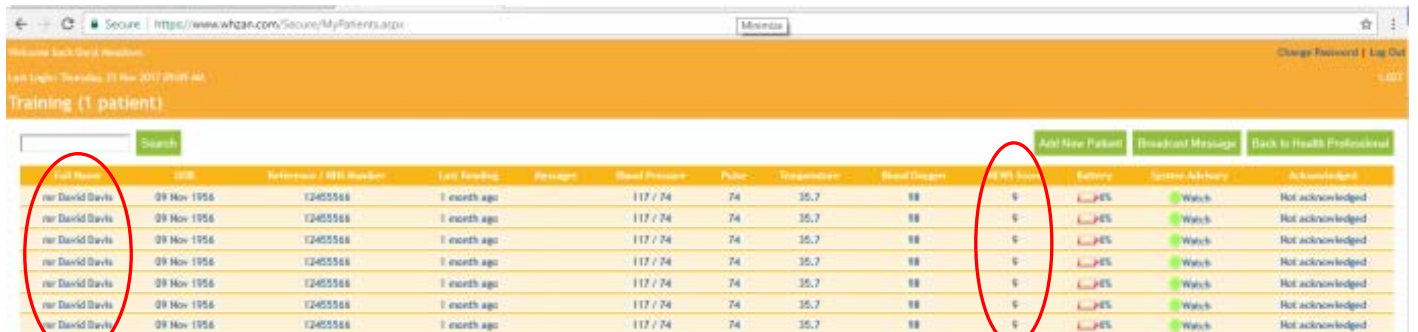

3. When you have logged in, this is the page that will come up.

This will list the homes that you have been given access to by name. These are links to that home's list of residents.

This will list the number of residents that are using Whzan in that home

4. If you click on one of the homes you will be taken to this screen. Here you will get a list of residents and some basic information.

This is the list of the residents by name. These are links to access further information about an individual.

The latest NEWS taken for the resident

5. If you click onto a resident's name this overview screen will come up for that individual.

This button will display chart forms of the readings. (See below)

This button will take you to the settings for this resident. (See below)
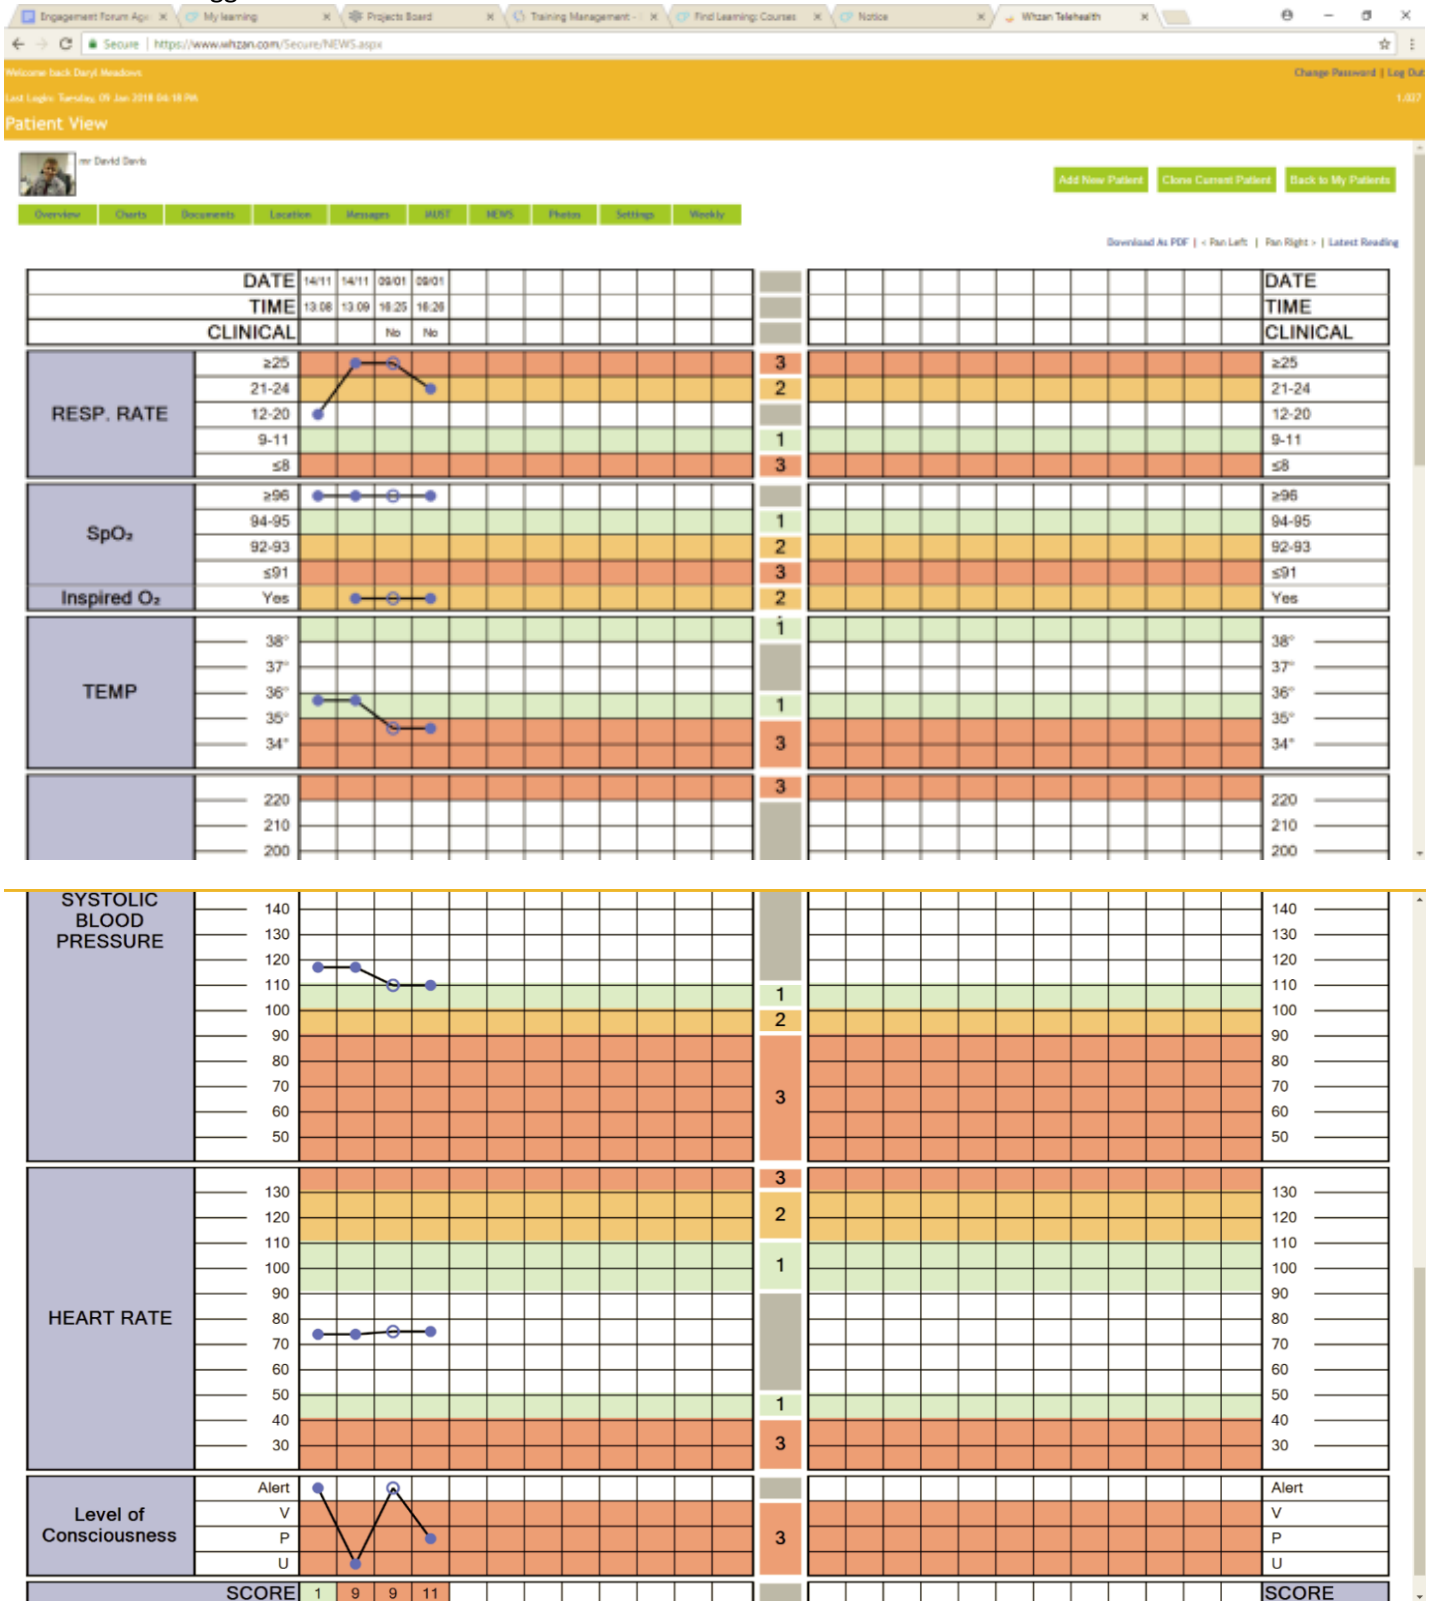

This will display the results for each reading. It will display the latest ones taken, who they were taken by and when.

This button will display chart forms of the NEWS and break down the reasons for the score. (See below)

5a . If you click on the 'Charts' tab on the above page, then you will be taken to this screen. Here you will receive a graph display of all the readings done with the resident. This is a good way of identifying changes or deterioration.

5b. If you click on the 'NEWS' tab, this screen will appear. It will display the category that the scores fell into, providing justification for the NEWS result with more detail and identifying the readings that suggest a risk.

5c. If you click on the 'Settings' tab this page will come up. This is where you are able to adjust the plans for each resident.

> You will be able to create a schedule of the readings that are required for the resident. This will automatically have NEWS and the required readings to achieve the score, so it is unlikely it will need changing. However, If you have any concerns then you will be able to request further monitoring of a particular measure.

> You can also alter the pre-set scores for NEWS in order to make it personalised to each individual. Again it is unlikely that you will be required to do this. But for example, if someone has a usually high blood pressure, you could adapt their scoring to account for this in the NEWS so risks are not constantly raised unnecessarily.
